#### **DETAILED ACTION**

- 1) This is a Final Rejection in response to arguments filed on 9/1/05.
- 2) Claims 1-28 are pending and rejected.
- 3) Examiner withdraws the 35 USC 112 of "standard escape notation" because the Applicant points out (in the Specifications) that standard escape notation we well known in the art (as indicated in the specification of 6/8/2001, page 4, line 6). This knowledge (of being known in the art) can preclude the patentability of claim 9.
- 4) The Examiner withdraws the 35 USC 101 rejection for claims 1-28.
- 5) Effective filing date is 6/8/2001.

## Claim Rejections - 35 USC § 102

6) The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 6-1) Claims 1-6, 11-19 and 24-28 rejected under 35 U.S.C. 102(b) as being anticipated by <u>Unger</u> et al (US 5991713, Nov 23, 1999).

Regarding claims 1, 13, 17, Unger teaches accessing source HTML data, simplifying the HTML data, the simplifying minimizing the size of the HTML data, knowledge of the HTML data being used during the simplification; encoding the simplified HTML data; and storing the encoded HTML data. For example, Unger discloses an efficient method for compressing, storing and transmitting natural language text including HTML files identified by the author (col 8, lines 25-31). The examiner

Art Unit: 2176

interprets the disclosed author identifying as equivalent to the claimed accessing. The complier parses the hypertext file in order to separate the tags from the corresponding text and objects, thereafter, the complier compresses the text contained within the files and stores the compressed text according to any suitable encoding technique including Huffman, or simple run-length encoding (col 8, lines 45-52). The files can be compressed using the encoding technique to make the contents of the file 2 to 10 times smaller than the input source file that they were generated from (col 11, 55-59), which the examiner equates to the claimed minimizing because making content 2 to 10 times smaller is alteration of data to minimize.

Regarding claims 2, 15, 27, Unger teaches "transmitting ... access to the HTML data". For example, Unger discloses an efficient method for compressing, storing and transmitting natural language text including HTML files identified by the author (col 8, lines 25-31).

Regarding claims 3, 16, 28, Unger teaches "transmitting ... computing device" For example, Unger discloses an efficient method for compressing, storing and transmitting natural language text including HTML files identified by the author (col 8, lines 25-31).

Regarding claims 4, 14, 26, Unger teaches "HTML data ... web page" (ie., web page)(col 12, line 41).

**Regarding claims 5, 18**, Unger teaches "simplification ... space ..." (ie., white space)(col 10, lines 40-50).

Art Unit: 2176

Regarding claims 6, 19, Unger teaches "simplification ... HTML data" (ie., compression of text files ... encoding documents ... words or strings ...)(col 8, line 55 – col 10, line 67).

**Regarding claim 11**, Unger teaches "encoding ... Huffman ... HTML data" (col 8, line 52).

Regarding claim 12, Unger teaches "storing ... cache" (ie., cache with browser)(col 12, lines 45-50; fig 11, item 86, 88).

## Claim Rejections - 35 USC § 103

- 7) The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:
  - (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 7-1) Claims 7, 20 rejected under 35 U.S.C. 103(a) as being unpatentable over Unger (as cited above), in view of <u>Povilus</u> (US 5740425, issued Apr 1998).

Regarding claims 7, 20, Unger does not expressly teach, but Povilus teaches "simplification ... HTML data" (ie., normalizing SKU tables for catalogs; HTML data)(col 29, lines 30-55).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Unger to include normalizing tables for catalogs for HTML as taught by Povilus, providing the benefit of compression of SGML/HTML data on the internet (col 29, lines 30-55).

Art Unit: 2176

7-2) Claims 8, 21 rejected under 35 U.S.C. 103(a) as being unpatentable over Unger (as cited above), in view of Chanod et al (US 6393389, filed Sep 1999).

Regarding claims 8, 21, Unger does not expressly teach, but Chanod teaches "simplification ... HTML data" (ie., HTML tags formatted)(col 23, line 39)(ie., reorder tokens)(col 20, lines 10-11)(ie., rewriting rules ... reorder entries)(col 24, lines 40-48).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Unger to include HTML tags formatted and rewriting rules to reorder entries as taught in Chanod, providing the benefit of formatting information and logical structure such as HTML tags (col 10, lines 14-17).

7-3) Claims 9, 22 rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Unger</u> (as cited above), in view of <u>Anderson</u> et al (US US 6021202, issued Feb 2000).

Regarding claims 9, 22, Unger does not expressly teach, but Anderson teaches "simplification ... escape notation" (ie., escape sequence ... ASCII formats)(col 19, lines 15-22).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Unger to include escape sequence as taught in Anderson, providing the benefit of data compress (col 19, line 22) with HTML data (col 18, line 24).

7-4) Claims 10, 23 rejected under 35 U.S.C. 103(a) as being unpatentable over <u>Unger</u> (as cited above), in view of <u>Burrows</u> et al (US 5963954, issued Oct, 1999).

Art Unit: 2176

Regarding claims 10, 23, Unger does not teach, but Burrows teaches "simplification ... HTML data into a single byte" (ie., abc word stored as one or more bytes)(col 9, line 65 – col 10, line 2).

It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Unger to include storing words as one byte or more as taught in Burrows, providing the benefit of compression of data structures (col 4, lines 33-40) in extremely large and complex databases that are dispersed over millions of different computers all over the world (col 1, lines 22-60).

## Response to Arguments

8) Applicant's arguments filed 9/1/05 have been fully considered but they are not persuasive.

Regarding claim 1, Applicant argues that the references do not teach simplifying the HTML data, the simplifying minimizing the size of the HTML data because the references do not teach alteration of data (see Remarks, pages 8-10). The examiner disagrees. For example, Unger discloses an efficient method for compressing, storing and transmitting natural language text including HTML files identified by the author (col 8, lines 25-31). The examiner interprets the disclosed author identifying as equivalent to the claimed accessing. The complier parses the hypertext file in order to separate the tags from the corresponding text and objects, thereafter, the complier compresses the text contained within the files and stores the compressed text according to any suitable encoding technique including Huffman, or simple run-length encoding (col 8, lines 45-52). The files can be compressed using the encoding technique to make the

contents of the file 2 to 10 times smaller than the input source file that they were generated from (col 11, 55-59), which the examiner equates to the claimed minimizing because making content 2 to 10 times smaller is alteration of data to minimize.

Regarding claim 9, Applicant argues that Unger in view of Anderson does not teach use of standard escape notation (Remarks, page 10). The examiner disagrees. It would have been obvious to one of ordinary skill in the art at the time of the invention to modify Under's teaching of compressing text according to any suitable encoding technique including Huffman, or simple run-length encoding (col 8, lines 45-52) to include encoding using SGML escape sequence for as taught by Anderson (col 19, lines 15-22) for compressing data with HTML data (col 19, line 22, col 18, line 24).

#### Conclusion

THIS ACTION IS MADE FINAL. Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
